Genetically Modified Organisms (GMO) Statement

July 2026 | Version 2.0

Flora Food Group Policy on Genetically Modified Organisms (GMOs)

We are driven by our Purpose: Culinary Essentials for Better Food. We focus on the everyday ingredients that help more meals turn out delicious, nourishing, and made with care. We support both home and professional kitchens worldwide. Our Culinary Essentials for Better Food combine performance, flavour, nutrition, and consistency at scale.

We are proud to offer choice to consumers, with a broad range of products to suit different preferences, needs and uses. With this in mind, responsibly sourced, scientifically assessed and authorised GMO ingredients can be one of the tools used to create food with great performance, that delivers on our approach to nutrition.

Multiple regulatory and scientific bodies (such as the European Food Safety Authority (EFSA), the U.S. Food and Drug Administration (FDA), the US Department of Agriculture (USDA), the US Environmental Protection Agency (EPA), and Food Standards Australia New Zealand (FSANZ)) have concluded that from a human and environmental perspective, authorised GM crops and food ingredients produced from them are safe.

However, we are aware of stakeholder concerns around the potential ecological and health-related impacts of some applications of certain genetically modified organisms. With this in mind, we have strict responsible sourcing policies in place to ensure the highest standards for all ingredients and crops used in our products are met. Flora Food Group controls any potential risks related to GMOs in our products by following all regulatory requirements to ensure our products are safe, including the sourcing of GMO and non- GMO ingredients.

Where relevant, we apply additional controls to ensure absence of GMOs when this is indicated on packaging or marketing materials. This may include certification and declarations or questionnaires from suppliers.
